

AP Web Viewer – Work Instructions

What is AP Web Viewer

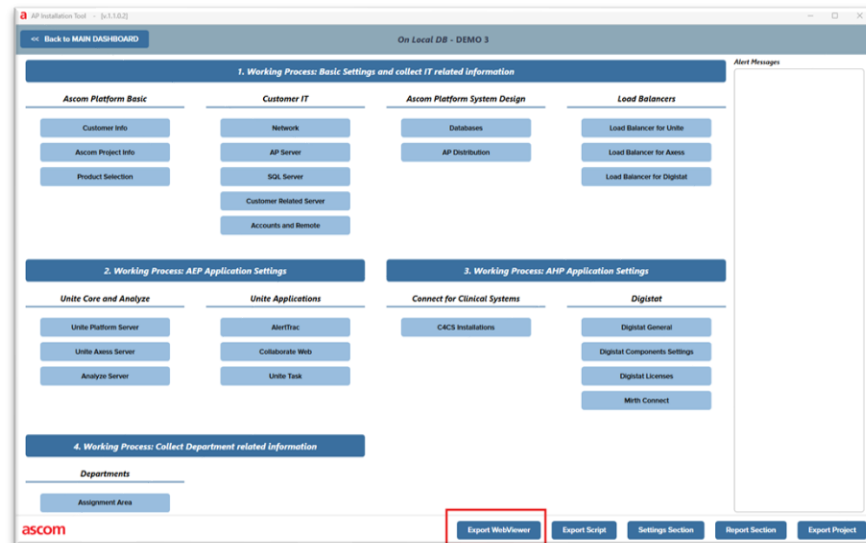

AP Web Viewer is a web application allowing you to read files in a proprietary format generated using AP Tool (encrypted JSON file).

The purpose of this web application is to give the possibility of viewing the same information contained in an AP Tool project without having to use the AP Tool itself.

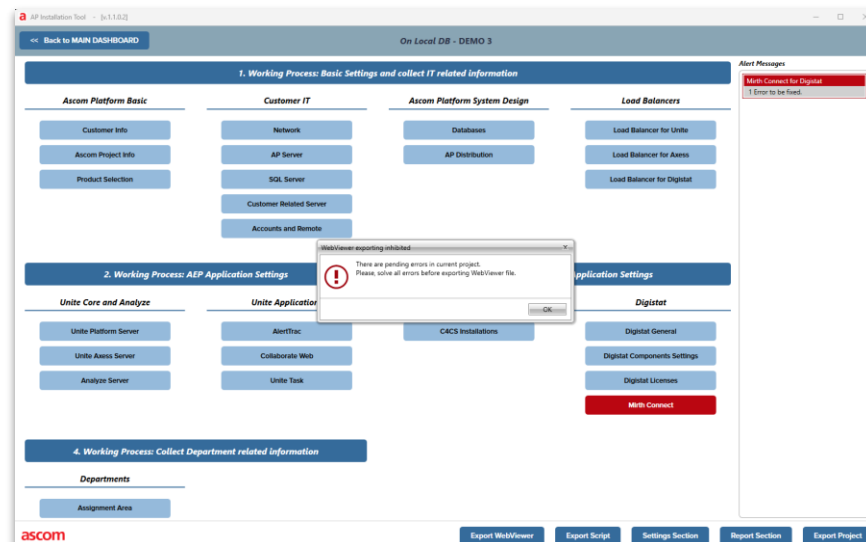

The encrypted JSON file readable by the AP Web Viewer can be stored in any Ascom repository (Regional SharePoint, AX, etc.) as part of the official documentation produced for a given solution.

How to generate an Export file for AP Web Viewer

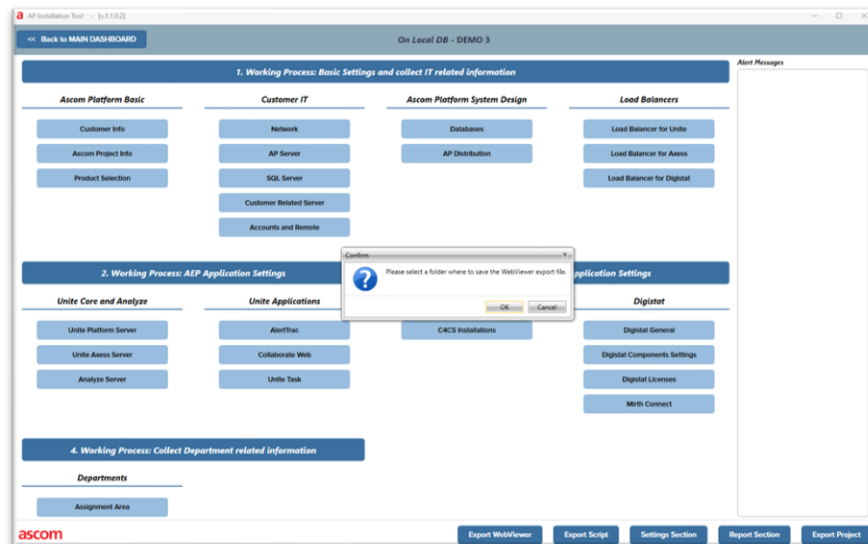

From AP Tool, you can export an encrypted JSON file designed to be opened on the AP Web Viewer site. After opening a project in AP Tool, you can press the “Export Web Viewer” button on the bottom bar (squared in red in the following image).

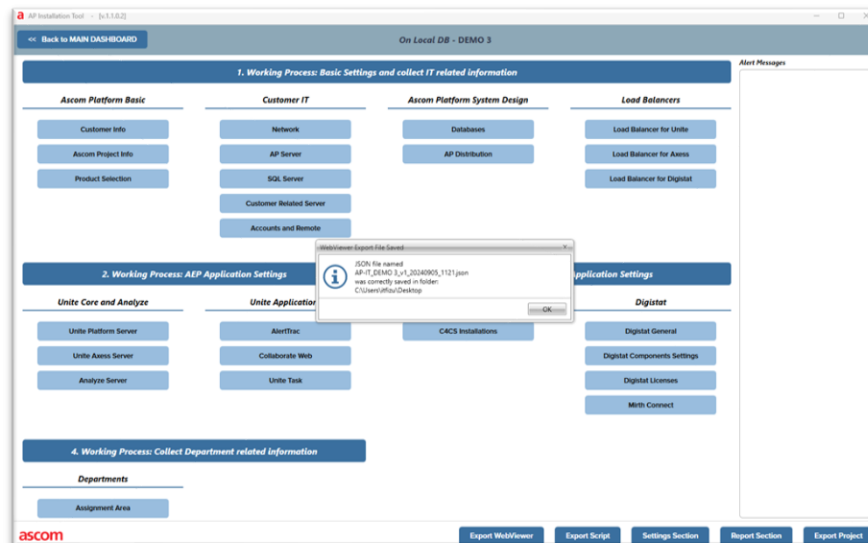

The export will be possible only if there are no errors on the selected project. Should you try to export the JSON file on a project containing errors, you would receive an alert message and no export will be done (as shown in the following image).

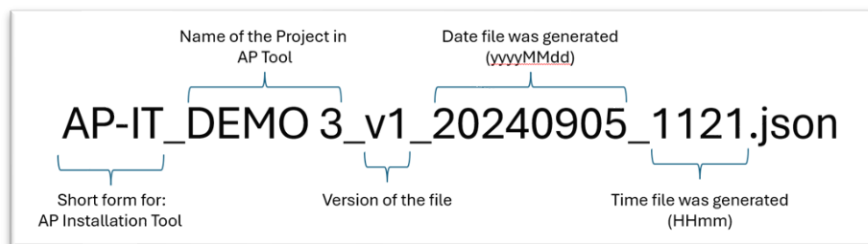

After solving any pending issues on the project, you can press the Export button and select a folder where to export the encrypted JSON file.

At the end of exporting process, you will receive a message showing name and location of encrypted export JSON file.

In the name of the file are saved several information, analyzing the one in the example:

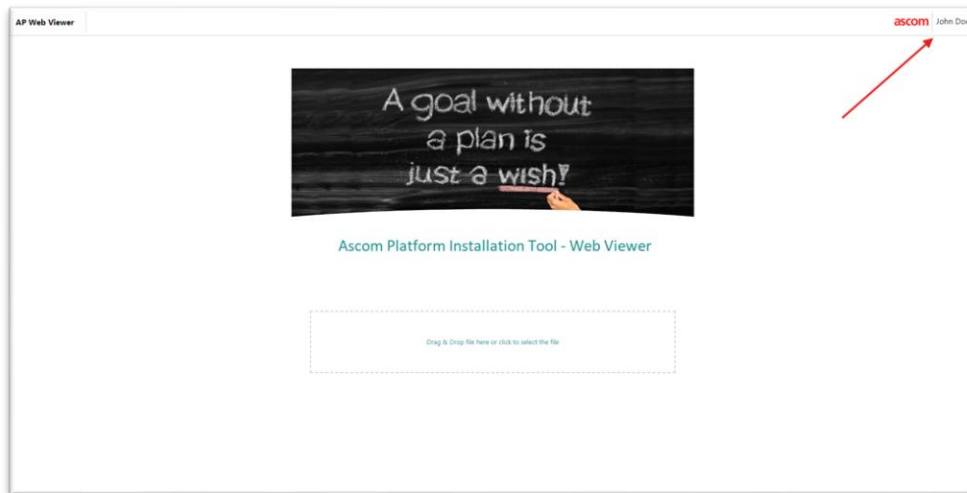

AP Web Viewer

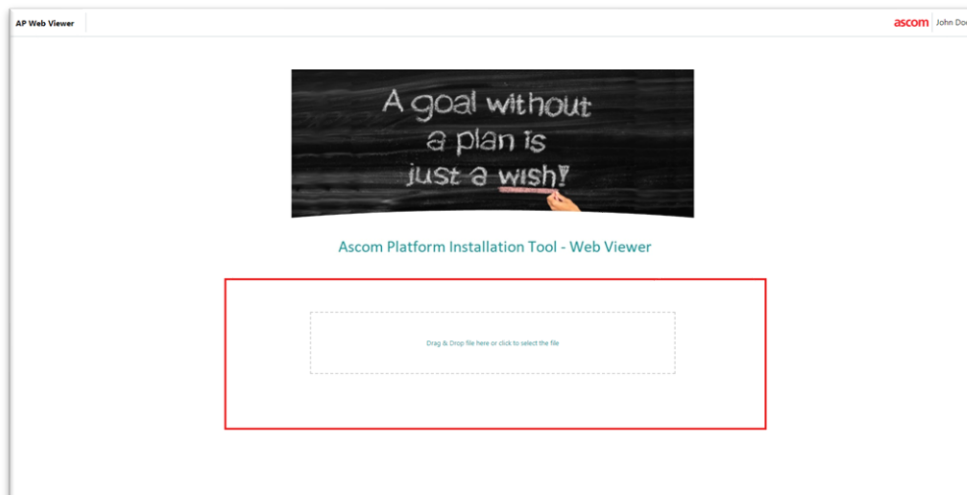

AP Web Viewer is a website reachable within an Ascom Network or when connected via VPN to Ascom, at the following address:

<http://segotgdel/APWebViewer>

As you access this website, you are automatically recognized as an Ascom user and your full name will appear on the top right corner of the webpage.

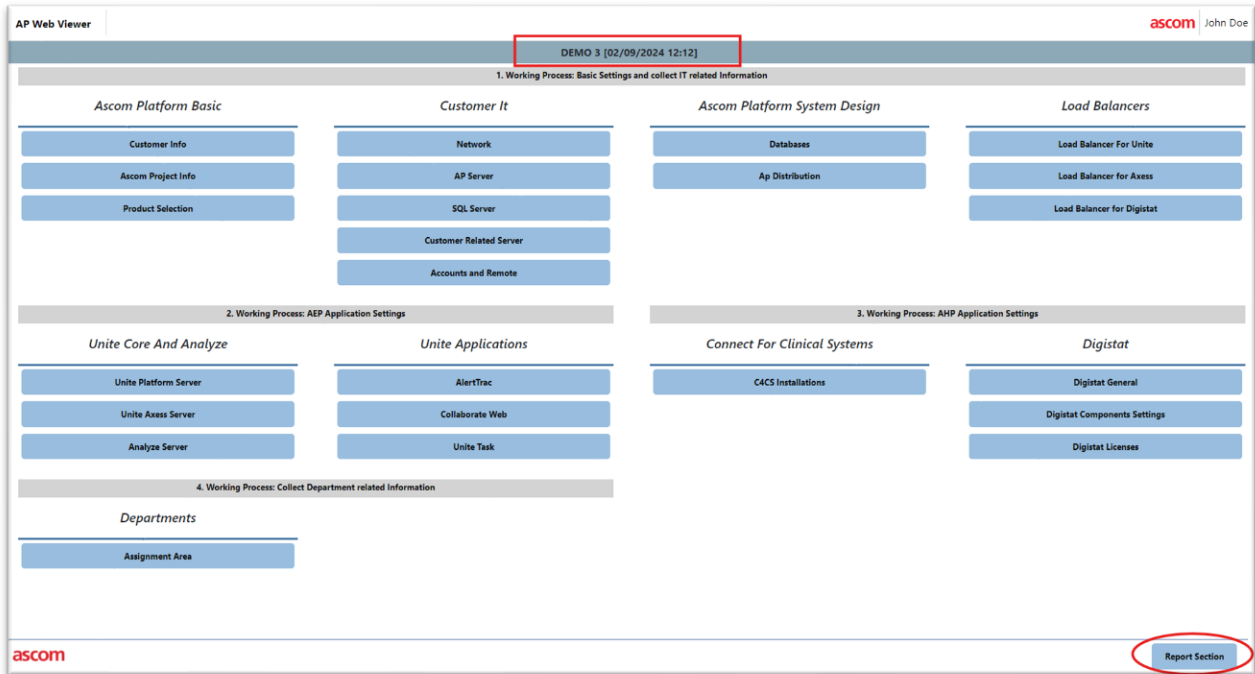

To open and navigate a pre-generated JSON file simply drag and drop it into the specified drop box.

You will access an interface quite similar to the application and you can navigate all contents in a view only mode.

On the top bar (squared in red in the image) you will find the name of the project ('DEMO 3' in the image) together with the Date and Time the JSON file was generated inside AP Tool. You will also have a 'Report Section' button in the bottom bar, that will allow you to access the PDFs related to the project itself (PDFs are saved directly inside the JSON).

AP Web Viewer Navigation

To navigate within a project in the viewer, you should press the button circled in red in the following image, to navigate back to the Project Dashboard of the JSON file.

The screenshot shows the 'AP Web Viewer' interface. At the top, there is a header bar with the title 'AP Web Viewer' on the left and the 'ascom' logo and user name 'John Doe' on the right. Below the header, there is a sub-header 'DEMO 3 [02/09/2024 12:12]' and a section titled 'Customer Info'. A message states: 'The purpose of the AP Installation Tool is to provide the input data necessary to install the Ascom Healthcare Platform and provide data to necessary 3rd party systems.' Below this, there is a 'Site Information' section with four input fields: 'Customer Name' (containing 'Demo Customer Name'), 'Address' (containing 'Demo address'), 'City' (containing 'Demo City'), and 'Ascom Project ID' (containing 'demoAscomProjectID'). Below the input fields is a 'Document Revision History' section containing a table with three columns: 'Name', 'Change History /Description', and 'Date'. The table has three rows of data.

Name	Change History /Description	Date
Demo Rev1	first commit	23/05/2024 00:00
Demo Rev2	second commit	24/05/2024 00:00
Demo Rev3	third commit	25/05/2024 00:00

By pressing on “AP Web Viewer” name on the Top Bar (squared in red in the following image) you will go back to the main page where you will be able to load another JSON file by drag and drop as described before in this document.

This screenshot is identical to the one above, showing the 'AP Web Viewer' interface with the 'Customer Info' form and the 'Document Revision History' table. In this version, a red square highlights the 'AP Web Viewer' text in the top left corner of the header bar.
